

General Company Information

Since its establishment in the year 1989, the Bremer pro aqua GmbH has been operating in all areas of water and waste water treatment.

In doing so, the main focus is on industrial waste water treatment, urban sewage technology, drinking water purification, process water treatment as well as swimming pool technology.

During the past years more and more anaerobic plants such as UASB-reactors and their refined versions the EGSB-reactors for industrial water, fermentation plants for production waste material in the food industry and biogas plants in agriculture have been being added.

In addition to a line of experienced project engineers and an effective CAD engineering department, the Bremer pro aqua GmbH also employs an appropriately large number of assembly operators and construction supervisors who are responsible for the installation and activation of the developed plant engineering.

The Bremer pro aqua GmbH resides in the close vicinity of the Technology Park of the University of Bremen and close to the motorway A 27, with its own office building and separate production facility.
